TECHNICAL SKILLS

- **Languages:** Python, Vanilla JavaScript, HTML5, CSS, SQL
- **Frameworks & Libraries:** Django, React, Express.js, Node.js
- **Databases:** PostgreSQL, MongoDB
- **Tools & Platforms:** Git, GitHub, Docker, JWT, Google OAuth
- **Concepts:** Full-Stack Development, Code Review, API Development, Troubleshooting

EXPERIENCE

Full-Stack Software Engineer, Outlier Ai, September 2024 - Current

- Developing & enhancing production web apps using Python (Django) & JavaScript, collaborating within a distributed team to deliver user-focused features
- Conducting peer code reviews to ensure quality, adherence to standards, & share knowledge
- Integrating & maintaining APIs & backend services with Python & PostgreSQL database
- Applying troubleshooting & critical thinking skills to diagnose & resolve full stack issues
- Collaborating with team to solidify requirements, provide insight, & ensure goals are met
- Writing & reviewing production-level JavaScript, HTML, & CSS for front-end components

TECHNICAL PRODUCT DEVELOPMENT

Sprout - [GitHub](#) | [Live App](#) - Python, Django, PostgreSQL, & Docker

A full-stack plant care tracking application

- Built app independently using Python (Django), PostgreSQL, while containerizing with Docker
- Implemented Django-based user auth & designed model forms for data entry & tracking
- Engineered complete backend logic & database schema to manage user data & plant details

Bookworm - [GitHub](#) | [Live App](#) - Javascript, MERN, JWT, HTML5, CSS, & Group/Mob Coding

A collaborative, full-stack social library application featuring 3rd-party API integration

- Built with a 4-person team using GitHub team workflows for version control & feature integration
- Developed dynamic front-end interactions with JavaScript & implemented JWT authentication
- Integrated a comprehensive third-party API to browse & track book data

Presence Social - [GitHub](#) | [Live App](#) - Javascript, MongoDB, Express.js, Node.js, & Google OAUTH

A robust social media application where users share updates & engage with each other

- Developed independently using JavaScript, MongoDB, Express.js, & Node.js
- Implemented secure Google OAuth for user authentication & permission management
- Built features for user posts/engagement, received positive peer feedback on code structure

EDUCATION

General Assembly, Immersive Full-Stack Software Engineering Certification - March 2024

420 hours of intensive training in proactive product development, MVC frameworks, data science, and collaborative engineering practices - building a foundation for 2+ years of hands-on full-stack development experience with core technologies.
